(a) Saturation under the full profile (T_1+T_2+depol)
$\star = L^*$
noiseless: $\sim L/2$
$\delta t/T_2 = 0.02$ ($T_2 \approx 50$, $T_1 = 2T_2$, $r_{1q} = 0.002$)
$\delta t/T_2 = 0.05$ ($T_2 \approx 20$, $T_1 = 2T_2$, $r_{1q} = 0.002$)
$\delta t/T_2 = 0.1$ ($T_2 \approx 10$, $T_1 = 2T_2$, $r_{1q} = 0.002$)
$\delta t/T_2 = 0.2$ ($T_2 \approx 5$, $T_1 = 2T_2$, $r_{1q} = 0.002$)
